

The most affordable and empowering OHM versions available are OHM/ASP and OHM/Web. If you're using a Windows-based application, switch now to get more benefits and cost savings. OHM/ASP is truly the best, offering 24/7 access, instant version updates, world-class secure hosting and lower cost of ownership with reduced expenditures on equipment and support.

More Features, More Power, Lower Costs

Since 1986, OHM's multi-module solution and detailed tracking and reporting tools have empowered professionals like you to streamline information management, maximize consistency and accuracy, identify problem areas and risk, reduce workplace incidents, and maintain compliance. During that time, OHM has been highly regarded for its ease of use and flexible delivery and configuration options designed to fit nearly any environment, workflow and budget.

But we would be doing you a disservice if we did not emphasize the many advantages of web-based delivery options—especially our fully hosted OHM/ASP. Put simply, OHM/ASP and OHM/Web give you more features, power and convenience than other OHM versions—all at a much lower cost of ownership.

Why? Partly it's the technology itself. Web-based solutions allow PureSafety to deliver more functionality—and get it to you faster. We understand the “comfort factor” of a Windows-based product for some clients, but it's undeniable that web-based technology is more cost-effective for your organization and more convenient for your users. With OHM/ASP and OHM/Web you can use virtually any Internet-connected computer, anytime, anywhere, even wirelessly, to gain real-time access to your OHM database. This also simplifies information-sharing between departments, locations or across your entire enterprise via a single, standardized database.

Web-Based vs. Web-Enabled

Don't confuse OHM/ASP and OHM/Web with “web-enabled” applications that use Citrix Metaframe® or Microsoft® Terminal Services. These offerings still require cumbersome, support-intensive layers to run smoothly, but OHM/ASP and OHM/Web are true web-based applications—with minimal maintenance, superior performance, and easier expansion compared to a LAN/WAN configuration. Our ASP service takes these benefits even further. With OHM/ASP, PureSafety hosts and maintains your database and application server on our secure servers, effectively eliminating your OHM-related IT tasks, including nightly back-ups. ASP service also means you always have instant access to upgrades and unlimited technical support.

Getting More Has Never Been Easier

You can read more about specific product features of OHM/ASP and OHM/Web on the back of this information sheet. Meanwhile, if you're concerned about disruptions from shifting your organization to a web-based solution, don't be. PureSafety's service-focused professionals and proven processes make the transition easy, hassle-free and cost-effective.

OHM/ASP and OHM/Web Product Highlights

Below are just a few areas where OHM/ASP and OHM/Web can empower you to simplify tasks and enhance results:

Automatic Email Notification of Pending Surveillance Requirements

Scheduled appointments can automatically be sent to both the patient and the examiner and interfaced with MS Outlook calendars. When a pending exam has a questionnaire, a hyperlink can be included so the patient can complete it online. The questionnaire data is automatically saved to the patient's record and a notification email can also be generated.

Anonymous Safety Reporting

Employees can anonymously submit reports on unsafe conditions or actions.

Batch Entry Functionality

Perfect for flu shot clinics, simply enter employee ID numbers and every record is updated with vaccination information. Batch entry is also available for PPDs and in Medical Surveillance for Batch Exams, Batch Assign, and Batch Questionnaires.

EDI

You can transfer workers' compensation data in IAIABC and ANSI ASC X12 formats for the state First Report of Injury and Subsequent Report of Injury. The EDI process may be run manually or set to run automatically on a predefined schedule.

Electronic Medical Record (EMR)

EMRs provide nurses and examiners quick access to a patient's complete medical record online, so there's no need to run a report or waste time sorting through paper files.

Electronic Prescriptions

Enter and track prescriptions using the encounter medications screen. An electronic prescription form can then be electronically signed by the provider and emailed or printed.

Electronic Signature Feature

You can electronically sign your Encounter narrative field so that your notes become a permanent part of the EMR.

Electronic Signature Pad Interface

Now you can capture the patient's signature electronically, eliminating the need for hard copies to be signed and scanned into the person's medical record.

Expanded Graph Capabilities

Powerful, built-in graphs are available in Medical Surveillance, Encounter Log, Case Manager, and Safety Manager modules. You may configure graphs and display them in a dashboard view or individually.

Job Safety Analysis (JSA)

Quickly author, revise and report on job-specific tasks/steps, potential hazards, controls and safety notes. Track employee reviews and automatically link a JSA to an incident report.

Link to Workloss Data Institute's Official Disability Guidelines (ODG)

This integrated subscription service provides disability duration guidelines and benchmarking data for every reportable condition, based on over 3 million cases from the CDC and OSHA, helping you to accurately calculate days saved in lost and restricted work cases.

Motor Vehicle Accident Tracking

OHM/ASP and OHM/Web provide date-specific and location-specific online views of motor vehicle accidents along with powerful tracking tools to monitor the number of motor vehicle accidents, preventable accidents, miles driven, and traffic violation data.

Safety Manager Notification

OHM's web-based solutions can be configured to automatically notify the Safety Manager whenever an accident or incident occurs. Email notification can also be used when a supervisor needs to complete an online safety investigation, or to ensure accountability when reports or countermeasures are due.

Upload Documents

Scan or upload images, video clips, and documents to an employee's record in: Employee Demographics, a specific Encounter, a workers' compensation case, an accident or injury investigation, and more.
