

At PureSafety we measure the value of our software solutions by what they empower *you* to do. It's not enough for our solutions to be innovative – they must also be flexible, easy to use, and powerful enough to drive results. Since 1986, OHM has provided that value to professionals like you.

One Comprehensive and Effective Solution

When it comes to occupational safety, health and medical management, OHM is the industry's most comprehensive and effective software solution. The first software solution to integrate every tool necessary for occupational safety, health and medical professionals, OHM combines modular design and highly flexible delivery and configuration options to ensure that your OHM solution fits your workflow, environment and budget.

Dozens of Modules and Add-Ons in Three Convenient Industry Suites

OHM modules and add-ons are designed to automate and streamline every area of occupational safety, health and medical management. Just as importantly, OHM integrates the detailed tracking and reporting tools you need to streamline information management, enhance workflow, and maximize consistency and accuracy—ultimately eliminating the cost and inefficiency of combining multiple single-point solutions.

For your convenience, PureSafety packages OHM modules in three comprehensive suites:

- **Industrial** – designed for sites providing in-house services to employees
- **Hospital** – designed for hospital-based customers providing in-house services
- **Clinical** – designed for clinics providing in-house services as well as multi-client service providers

The chart on the back of this information sheet identifies the modules that come with each suite. Because OHM is fully configurable, individual modules and add-ons can easily be plugged in to your solution, so you get all the features and functionality you need, without paying for anything you don't need.

Multiple Delivery Options

OHM has a long history of providing delivery options to fit a broad range of environments. While we continue to support our legacy solutions, PureSafety is committed to expanding your most affordable and empowering OHM delivery options: OHM/ASP and OHM/Web. These versions offer considerable advantages, including 24/7 remote access, automatic email notification, fast updates and *lower total cost of ownership*.

Endless Benefits for Your Organization

PureSafety understands that, to be effective, OHM must fit into your larger organizational processes and objectives. That's why we partner with leading instrumentation manufacturers and lab providers to ensure maximum ease and efficiency when receiving test results. It's also why our goal is always to tailor OHM to fit your workflow—then provide the industry's best training and support services to make sure you get maximum value. This approach has helped to make OHM the most widely used occupational safety, health and medical management software solution of its kind, with thousands of customers ranging from small clinics to five of the top 10 Fortune 500 companies. More importantly, it will deliver unmatched ease, convenience and bottom-line business benefits to *you*.
