

OHM's Safety Manager module provides all the management, recording and analysis features you need to keep your people safe, healthy and on the job, while reducing total costs. Add Safety Manager to your OHM solution to expand your ability to streamline safety processes and reduce workplace incidents.

Unmatched Efficiency and Bottom-Line Business Benefits

Safety Manager empowers you to:

- Standardize the safety management process so all areas of your organization operate in a consistent, repeatable manner
- Enhance incident investigation processes to quickly identify unsafe situations and take corrective action
- Simplify data entry and improve accuracy
- Streamline information-sharing between supervisors, managers, safety professionals, and medical staff
- Drive accountability throughout your safety program
- Automate compliance reporting
- Improve job site safety and employee productivity

Do More—With More

OHM's functionality in the area of safety management is so comprehensive and robust that it's like adding new employees to your safety management team. OHM's Safety Manager puts unmatched power at your fingertips to:

- Track and report incidents, as well as near misses, unsafe actions, and unsafe conditions
- Conduct detailed accident investigations
- Determine OSHA recordability of workplace injuries and generate OSHA 300, 300A, and 301 logs
- Analyze root causes and causal factors that lead to workplace injuries
- Use safety data to identify "safety hotspots" that need attention
- Assign and manage corrective actions
- Create a Job Safety Analysis (JSA) to record specific descriptions about how to perform a job-related task, including any associated hazards and suggested controls
- Ensure timely task completion by automatically notifying medical staff, supervisors, managers, and safety professionals of tasks that are due
- Help place employees in jobs suitable to their work restrictions
- Report on key safety metrics and trends
- And much more!

Do More—With Automated Email Notifications

Designed to enhance accountability and ensure timely, accurate completion of accident reports, OHM's Safety Manager includes a configurable email notification feature to remind staff to complete assigned tasks and notify appropriate personnel if the process stalls. For example:

1. When an accident occurs, your team initiates the accident investigation process by saving the injury case in Case Manager, which automatically sends an email notification to the injured employee's supervisor, their manager and the safety manager.
2. After entering relevant information, the supervisor submits the report to his/her manager.
3. The manager receives an email notice to review the report and accept or deny it.
4. Upon acceptance, an email notification is sent to the safety professional for final review.
5. If corrective actions are required, they can be specified and assigned accordingly, which also triggers automatic email notifications.

Be sure to read the back of this sheet for more information about Safety Manager's powerful features, including incident rate tracking and scorecards!

Do More—With Electronic File Attachments

When it comes to accident investigation and reporting, a picture—or a video clip, or a supporting document—is worth a thousand words. With Safety Manager, a couple clicks is all it takes to attach any electronic file, enhancing the quality of your accident investigation and reporting while reducing the time spent on these activities.

Do More—With Automated Incident Rate Tracking

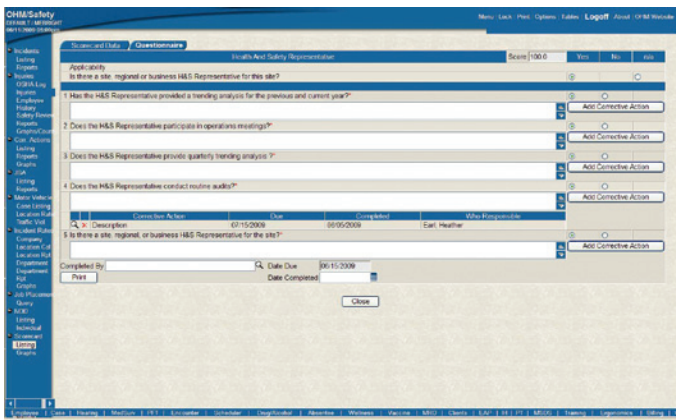

Safety Manager automates incident rate tracking, instantly calculating key rates such as Lost Time Incident Severity by company, location or department. Combined with powerful graphing and reporting options, OHM enables you to check rates easily and often, quickly identify trends and problem areas, and respond accordingly.

Do More—With Motor Vehicle Tracking

Monitoring the safety performance of an organization’s motor vehicle fleet is critical, but it can also be very time-consuming. Safety Manager brings ease and efficiency to all aspects of this responsibility: accident reporting, monitoring traffic violations, assigning corrective actions, and much more.

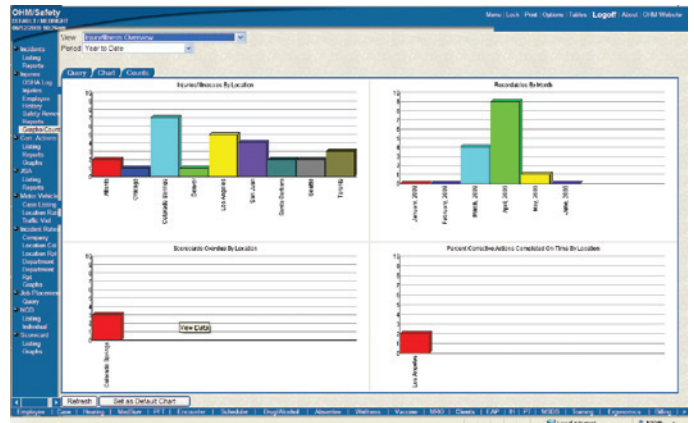

Do More—With Customizable Safety Scorecards

The safety data that is most important to track varies in different industries and work environments. So Safety Manager not only gives you a safety scorecard feature, it also makes it easy for you to customize scorecards for your organization. This is especially valuable in supporting facility audits. You decide what needs to be audited, then follow OHM’s template, checking the appropriate selections and adding relevant yes/no questions to create a scorecard that fits your needs. Safety Manager automates the rest, and can also be configured to leverage OHM’s e-notification capabilities, corrective action data, and more.

Do More—With More Dashboard Power

When asked what makes OHM’s Safety Manager more valuable than similar solutions, many clients put powerful dashboard functionality at the top of the list. Safety Manager allows you to view up to four dashboard graphs at once in the core areas of safety, injury/illness, corrective actions, and causal factors. For example, you can configure a dashboard to show injuries/illness by department, body part, nature of injury, and loss potential, or set up a corrective actions dashboard by days until due, days open, type and location. This feature also allows you to make year-to-year and other comparisons in no time at all. Powerful and flexible, the Safety Manager dashboard can be configured to instantly show the information that is most important to you and your organization.
