

PureSafety®

Content Editing System

Easy. Cost-Effective. Yours.

The PureSafety Content Editing System (CES) is a powerful, web-based course editing and creation tool that allows you to efficiently customize our award-winning Flash-based courses. Now virtually anyone in your organization can seamlessly customize, manage and deploy world-class courseware in a fraction of the time required by traditional development environments.

Customize PureSafety Courses with Ease

PureSafety offers the highest quality and most effective online workplace safety courses available. Customizing these courses with imagery and information specific to your industry, organization and job functions has been shown to improve overall learning effectiveness and training satisfaction. Now we've made it even easier to customize everything you see, hear or read in the PureSafety courses of your choice.

Our revolutionary CES delivers a fully hosted, enterprise-level development environment that makes modifying our existing high impact, Flash-based courses simple and affordable. The intuitive user interface provides easy point-and-click/drag-and-drop interaction for numerous media elements within a course, including text, images, audio, and other multimedia objects that make up our presentations.

Key Features:

- Intuitive, web-based user interface
- Permission-based security levels
- Requires no proprietary plug-ins
- Course text, image and audio customization options
- Convenient Digital Resource Library
- Built-in course versioning and categorization options
- AICC/SCORM conformant course publisher

Quality and Efficiency

To ensure you deliver the highest quality courseware and improve customization efficiencies, the PureSafety CES provides permission-based security levels, versioning and convenient preview options to facilitate the development and review of courses by your subject matter experts (SMEs).

We utilize flexible development methodology, which includes specific stages or “rounds” to direct the activities of your SMEs as they work together to complete a project. Our built-in versioning system allows your SMEs to effortlessly track changes and even organize custom courses into meaningful categories.

Your SMEs also have the ability to preview customized courses exactly as learners will see them, which provides for better quality control prior to launch in the Learning Management System (LMS) of your choice.

Our convenient Digital Resource Library allows easy access to both PureSafety and customer media assets.

Digital Resource Library

Our built-in Digital Resource Library provides your SMEs with easy access to our existing library of course images, audio files and Adobe® Flash® animations. It also provides a convenient repository for your organization’s personal media assets throughout the customization process.

Interested in Custom Course Development?
Look to PureSafety’s talented team of SMEs, instructional designers, graphic artists, quality assurance specialists and project managers. We can assist you with even the most unique training development needs.

AICC/SCORM Publisher

Once courses have been modified to your satisfaction, they can be saved and published to either an AICC or SCORM format for delivery in the PureSafety LMS or any third-party learning management or enterprise software system of your choice.

Pure Results

When you leverage the power of the PureSafety CES, you’ll appreciate the intuitive user interface and expert training you receive. And you’ll value our streamlined, cost-effective process.

But when it comes to workplace safety training, what really matters is *results*. And that’s where every PureSafety course — off-the-shelf, customized, or created just for you — excels. Smartly designed, highly interactive and engaging, our courseware can help change behaviors, improve business performance, prevent injuries and, most importantly, save lives.
